1 Getting started

GastroMetrics calculates the real cost of every dish from your real ingredients — purchase price, net content, and waste — and automatically propagates it to your recipes, menus, and purchase orders. You don't need to know accounting: every screen explains the number you're looking at.

The first time you log in, a guided tour walks you through the Dashboard and ends by taking you straight to **Ingredients**, because that's always the real first step.

- 1 Load your ingredients.** From Excel (the "Import Excel" button) or by hand, one at a time. Purchase price, unit, and net content are enough to get started.
- 2 Build your first Recipe Sheet.** From Ingredients, the "Recipe Sheet" button takes you straight to creating a recipe with the ingredients you already loaded. Cost, food cost, and suggested price calculate themselves.
- 3 Compare and correct.** Over time, use Inventory and Purchase Orders so what you buy and what you actually consume matches what your recipes say you should consume.

Tip: the "Restart tutorial" button (bottom of the side menu) shows the guide again for whichever screen you're on, whenever you want a refresher.

The screenshot shows the GastroMetrics dashboard. At the top, a notification bar says "We updated our legal documents" with a "View documents" link. Below this, the user is greeted with "Good afternoon, Daniel" and a welcome message: "Welcome to your restaurant management dashboard". The date and time are "9/21/2026, 1:22:14 PM". A "New Recipe" button is in the top right. The "WHAT TO DO TODAY" section contains three items: "0 ingredients below minimum", "1 recipe with no sale price", and "Average margin: 63.0%". Below this is a summary table:

TOTAL RECIPES	INGREDIENTS	BUSINESSES	AVERAGE COST
10	415	2	L 21,352.46

The "My Businesses" section shows two businesses: "Negocio A QA" and "Negocio B QA", both created on 09 de sept de 2026, with "Open Dashboard" links. A "View All" button is on the right. The "Quick Actions" section has four buttons: "Ingredients Database", "Recipe Sheet Create recipes", "My Recipes View all recipes", and "Menus Menu management". An "Add Business" button is on the right.

The Dashboard summarizes what to do today: ingredients below minimum, recipes with no sale price, and your average margin — one click to each.

2 Ingredients

The ingredients database is the starting point of all costing. Each ingredient stores: category, purchase price, unit of measure, net content, supplier, and — if it applies — its waste percentage.

Add an ingredient

The "New Ingredient" button opens a 2-step wizard: general data (name, category) and pricing/quantities (purchase price, net content, unit). The system won't let you continue with a zero or negative price — it tells you what's missing.

Import from Excel

If you already have your ingredients in a spreadsheet, "Import Excel" recognizes typical columns (name, category, price, unit) in all 6 app languages, without having to retype anything by hand.

When an ingredient's price changes

You update the price **once**, on the ingredient. GastroMetrics automatically recalculates the cost of every recipe and sub-recipe that uses it — no need to open each recipe sheet by hand.

3 Recipe Sheet

The Recipe Sheet is the recipe with everything that defines its cost: ingredients, quantities, yield, procedure, and classification. From there, GastroMetrics calculates:

- **Production cost** — the sum of each ingredient according to the quantity the recipe uses.
- **Suggested sale price** — with professional rounding to the nearest 5.
- **Food Cost %** and **contribution margin**.

PAX modifier (servings)

You can temporarily scale a recipe to a different number of servings to see how quantities change — it's a preview: the real recipe doesn't change until you press "Save Recipe."

Sub-recipes

A recipe sheet can use another recipe as an ingredient (a base sauce, for example). Sub-recipes only show their real cost — they don't carry their own sale price or profit breakdown, because that doesn't apply to them.

Ingredients

Add Ingredient

#	CATEGORY	INGREDIENTS	QUANTITY	UNIT	COST/UNIT	EXTENDED COST ⓘ
1		Select ingredient				

Export any recipe to PDF in two versions: a "Quick Sheet" with no costs (to share with a supplier) and a full "administrative PDF" with costs and profitability.

4 My Recipes

This is where every saved recipe sheet lives, organized by classification (Appetizer, Main Course, Dessert, etc.). From each card you can edit, duplicate, export to PDF, or delete — with a warning if that recipe is used as a sub-recipe of another, so you don't break anything without noticing.

5 Inventory

The Inventory module tracks physical stock, separate from (but connected to) your Ingredients database.

Add Product

Create an inventory product with current stock, minimum stock, unit, presentation (box, can, bag, etc.), and supplier. You can edit any field directly in the table at any time.

Record Inventory

A 3-step wizard to do a full count (initial inventory, final, or a new purchase) against your whole ingredients catalog — with search to quickly find what you're counting.

STATUS	WHAT IT MEANS
Normal	Stock above double the configured minimum.
Low	Between the minimum and double the minimum — worth checking soon.
Critical	At or below the minimum stock — real risk of running out of that ingredient.

6 Menus

Build complete menus by course (Appetizer, Main Course, Dessert, or whatever your business uses) combining recipes you've already saved. It works both for a restaurant's menu and for an event with a fixed menu.

- 1 **Details** — name, menu type, service date (optional), and how many people this run is for.
- 2 **Steps** — define the menu's courses (Appetizer, Main Course, Dessert, or your own).
- 3 **Dishes** — pick one or more recipes for each course.
- 4 **Review** — adjust the needed quantity of each dish before creating the menu; this is what later feeds a Purchase Order generated from this menu.

7 Purchase Orders

Generate shopping lists based on what your recipes and menus actually need, not habit. Every order has a status (Pending → Approved → Ordered → Received), and marking it "Received" updates Inventory stock automatically.

You can duplicate a previous order in one click, or generate one straight from a specific recipe or menu. The "Purchasing Insights" panel shows which ingredients are the most used, the most expensive, and the ones that weigh most on your inventory.

8 Statistics and Finance

A complete overview of your operation in 4 views:

TAB	WHAT IT SHOWS
Overview	Best and worst margin among your recipes, average cost %, inventory value.
Sales	Manual log of your daily sales — no point-of-sale system needed.
Finance	Real P&L, importing sales from your POS, Menu Engineering (Stars/Plow Horses/Puzzles/Dogs).
Comparison	Theoretical food cost (what your recipes say it should cost) versus real (what you actually consumed) — the variance is where your margin is leaking.

9 Businesses (multi-business)

Manage several restaurants, branches, or brands from a single account. Each business has its own ingredients catalog, operating expenses, and pricing calculator — completely independent from each other, except when you decide to migrate a recipe from one business to another (with its ingredients and sub-recipes included).

10 Team

Invite as many people as your plan allows, and choose exactly what each one can see and do: which tools they have access to (Recipe Sheet, Inventory, Purchase Orders, Statistics, etc.) and whether their access is to the main Dashboard or a specific business.

11 Settings

Profile

Name, email, country, business type.

Appearance

Light/dark/system mode, and 12 color palettes for the main Dashboard.

Regional

Country, currency (only changes the symbol, doesn't convert amounts you already entered), and interface language.

Notifications

Email, push, and whether you want to receive product updates by email.

Account

Change email/password, and delete your account (with a 30-day grace period to change your mind).

12 Plans and what each one includes

GastroMetrics has a free-forever plan and 4 paid plans that add on features, not replace them. If a module in the side menu isn't in your current plan, you'll see it visually differentiated (dimmed, with a lock icon) and a message explaining which plan unlocks it.

PLAN	BUILT FOR
Foodie (free)	Costing your recipes: ingredients, unlimited recipe sheets, kitchen PDF.
Home Cook	Waste tracking, manual purchase orders, administrative PDF.
Chef de Partie	Full inventory, menus, automatic orders, usage statistics.
Sous Chef	Full finance: P&L, POS import, Menu Engineering.
Chef Ejecutivo	Multiple businesses and a team, with priority support.

Your data is never deleted when you downgrade: the limits and what you can export change, not what you already built.

We updated our legal documents [View documents](#)

My Plan

[← Back to Dashboard](#)

Switch plans whenever you want: the free plan applies instantly, paid plans simulate the payment step without charging your account.

BUSINESSES USED
2 / 5

Foodie Free	Home Cook \$15/mo	Chef de Partie \$35/mo	Sous Chef \$70/mo Most chosen	Chef Ejecutivo \$120/mo
To start organizing your recipes	For those already calculating costs seriously	To run a full kitchen	Total control of your business	For groups and chains

13 GastroMetrics on your phone

GastroMetrics can be installed directly on your phone as an app, no App Store or Play Store needed — so you can work from the kitchen without opening the browser every time.

- 1 **Android/Chrome:** open gastrometrics.org, tap the menu (:), and choose "Add to Home screen" or "Install app."
- 2 **iPhone/Safari:** tap the share icon and choose "Add to Home Screen."

Once installed, it works like any other app: its own icon, full screen, and navigation built for your thumb (a bottom bar with Home, Recipes, Menus, Inventory, and Numbers).

14 Support

Found a bug or have an idea? From any screen, the "Suggestions and reports" link (footer of Settings) sends your message straight to the team. You can also write to **gastrometrics@outlook.com** — we reply within 24 business hours.

© 2026 Gastrometrics. This manual reflects the version of the app current as of the date on the cover — some screens may vary slightly depending on your plan.
